|----|--|
| 1. | <p>What our group has done since last week:</p> <p>Our group studied and discussed the “Top-tips-for-working-effectively-in-a-group ” and “Surviving group work - tips for students”. We released the importance of trusting each other, dividing work equally, communicate effectively and so on. Moreover, we learned how to use the Overleaf and every member of our group add an image on that. In addition, we analyzed the requirements of the project, then ensured the method to achieve that after discussion. According to the requirements and method, we searched some sources on the internet and learn from that. For example, we found some videos about how to achieve chatting on the web pages and search the web design page. What’s more, we set up a leangoo group and make sure everyone is in that group, then we complete user story on the backlog.</p> |
| 2. | <p>Questions, issues?</p> <p>Our main issues are what the “two networked devices” and “cloud server” mean, is that means all we need to do is make a web page that runs on two devices, two devices, like computers and mobile phones. And link the client and servers with cloud server. In addition, do we need used this template in the end to finish our final report. Moreover, we have question about using Github, such as who is supposed to make a git group, etc. What’s more, is there new tasks for every week.</p> |
| 3. | <p>We would like feedback on...</p> <p>We would appreciate it if we could get feedback on our issue and the Overleaf work, such as if us added the image in a correct way are appropriate.</p> |

4.	<p>What we plan to do this week:</p> <p>We plan to start the design of our project. According to our schedule, we have two weeks to complete design, so we will discuss and define the overall framework of the project, which contains the front-end part, staffs' part, costumers' part and the database part. Then, we will design the divided parts in more details and complete the sprint on the leangoo.</p>
