Weekly Update

Group Name/number:_____Group 6_____

Date of update :_____3.2.2020 Monday_____

	Item
1.	What our group has done since last week: Our group studied and discussed the problem statement then determined the division of labor among the members in the work last week, for example we determined which part of the group is responsible for the front end of the web application and which for the back end. We also made our team agreement, separated our team into 4 groups and identified leaders for each group. Moreover, we made the overall plan for the project through Gantt Chart, in which we made plans for every time node including on each node what milestones should be achieved or what deliverables should be delivered.
2.	Questions, issues? Our main issues are about work package and Gantt Chart, how many details about the project should be contained in work package, how could every work package within the group relate to each other in content and how should we draw the Gantt Chart basing on all the six work packages in our group. Moreover, we have question about using Github, such as who is supposed to make a git group, etc.
3.	We would like feedback on… We would appreciate it if we could get feedback on our work packages and Gantt Chart, such as if our time nodes and work division are appropriate.
4.	What we plan to do this week: We plan to keep analysing the problem statement, analyse the user's requirements and decide what functions should our project achieve. We would also do other necessary preparatory work before the coding work started, such as get our Github group.
